November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases: older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_Main) and .rnpbn (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_Main) and .rapbn (Published_Applications_AA_New).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

clone.

Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (available by anonymous ftp from arthur.epm.ornl.gov.)

Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/~chris/GENSCANW.html), and NetPlantGene

BAC clone F16B3 is from Arabidopsis chromosome III and is near the molecular marker mi74.

The orientation of the sequence is from SP6 to T7 end of the BAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CDS
(http://www.cbs.dtu.dk/netpgene/cbsnetpgene.html), searches of the complete sequence against a peptide database and the Arabidopsis EST database at TiGR (http://www.tigr.org/tdb/at/at.html).
Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy.). Simple repeats are identified by repeatmasker (Arian Smit, http://genome.wustl.edu/eddy/tRNAscan-SE). Simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RW/RepeatMasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tranelation="Mikeesnesgtwaracdtcrsaactvyceadsaylcttcdaryh

REFERENCE 2 (bases I to 1163) AUTHORS Brover, V., Troukhan, M., Alexandrov, N., Lu, YP., Flavell, R. and Feldmann, K. TITLE Unpublished JOURNAL Grow Arabidopsis thaliana JOURNAL Grower, V., Troukhan, M., Alexandrov, N., Lu, YP., Flavell, R. and REFERENCE Submitted (11-MAR-2002) Ceres, Inc, 3007 Malibu Canyon Road, Mallbu, CA 90265, USA COMMENT This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TigR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent are 3'-truncated; approximately two percent represent alternative spilce variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequences are derived from the Ws or LAGI cotypes and therefore may contain and of the encoded protein. Please note that these cDNA sequences are derived from the Ws or LAGI ecotypes and therefore may contain polymorphisms when compared to sequence in contain of the should contain of the contain premature of sequences are derived from the Ws or LAGI ecotypes and therefore	full-length clones. Ceres, Inc. carried out the clustering of the 5' sequences, selection of clones, and sequence assembly. PEATURES Location/Qualifiers Location/Qualifiers Location-Corporation of clones, and sequence assembly.	/ AD XXEE= TATA AND SOLUTION TO THE STANDARY OF THE STANDARY O	Db 671 Tricccedectriccarrachedecedriccarrachedecreracecerrachedrata 730 Qy 521 GCGCTG-TTATAGTGCCAATTCATTCACAACTCATATAGGCTTTTGTTCATGGAAGCG 579 Db 731 GCGCTGTTTATAGTGCCAATTCATTCACAACTCATATAGGTCTTTTGTTCATGGAAGCG 790 Qy 580 ATATGGACGGCGAACATCATTCACACTCATATAGGTCTTTTGTTCATGGAAGCG 790 Qy 640 GGATACCATACACTCATGACTGCATCCATGGCACATCTGGCAGTAATGGGTGCA 639 Qy 640 GGATACCATACGATACACCACACACACACACACACATATGGTCATTATACCATATGG 699 Db 851 GGATACCATACGATACACACACACACACACACACACACAC

Submitted (16-5EP-2004) Motoaki Seki, RIKEN Genomic Sciences Center; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (B-mail:mseki@gsc.riken.jp, 100045, Japan (B-mail:mseki@gsc.riken.jp, 100045, Japan (B-mail:mseki@gsc.riken.jp, 100045-503-9625, Pax:81-45-503-9586)

An Arabidopsis full-langth cDNA library was constructed essentially as reported previously (Seki et al. (1998) Plant J. 15.707-720; Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI and XhoI was ligated to modified lambda FLC-1-E vector (Carninci et al. (2001) Genomics 77:79-90) digested with BamHI and SalI. This clone is in a modified pluescript vector.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     900
                                                                                                                                                                                            and encoding polymuclectides that impart at least one dwf7 mutant phenotype when expressed in a plant. The polymucleotide sequences encoding the mutant dwf7 proteins are useful for producing transgenic plants from transformed plant calls. The polymucleotide sequences are useful for altering the sterol composition of a plant relative to the wild-type plant. The transgenic plant has less cholesterol or increased atealor production relative to the wild-type plant. The mutant sequences are also useful for isolating or creating other mutant cell gene alleles and for detecting plant regulatory defects which can affect plant growth. The present sequence encodes Arabidopsis thaliana dwf7 homologue protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                     present invention relates to the isolation of dwarf7 (dwf7) mutants
                                                                                                   Novel isolated dwf7 polynucleotide for altering sterol composition of a plant, by introducing polynucleotide into plant cell to produce transformed plant cell and producing transgenic plant from transformed

```
The invention relates to an isolated dwarf? (dwf?) polynucleotide that imparts at least one dwf? mutant phenotype when expressed in a plant. The imparts at least one dwf? mutant phenotype when expressed in a plant. The convention also relates to a recombinant vector comprising the dwf? polynucleotide and control elements that are operably linked to the colynucleotide where a coding sequence within the polynucleotide can be cranscribed and translated in a host cell, and at least one of the control elements is heterologus to the coding sequence, a host cell control elements is heterologus to the coding sequence, a host cell control elements is heterologus to the coding sequence, a host cell control elements is heterologus to the coding sequence, a control element of the transgenic plant and a method of producing a transgenic plant and a method of altering the compression of a plant relative to the wild-type plant. The dwf? control composition of a plant relative to the wild-type plant. The dwf? C plants which display at least one dwf? phenotype, so that the resulting conserving other mutant alleles and for enableding or in industrial applications. The dwf? polynucleotides are useful for isolating or creating other mutant alleles and for enhancing certain features such as increased seed production. They are also useful for conferring desired tratts on any plant, for altering secon content and for providing a tool for increasing or reducing cholesterol content and for providing a tool for increasing or reducing cholesterol content and for providing a tool for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            studying the blosynthesis of brassinosteroids. The dwf7 control elemt is useful as a plant promoter to express any protein of interest in a transgenic plant, particularly to express a protein involved in brassinosteroid biosynthesis. The DWF7 polypeptide is useful in any blochemical applications, e.g., regulation of sterol synthesis, modification of elongation of plant structures and experimental or industrial biochemical applications. This sequence represents DWA encoding an Arabidopsis DWF7/STB1 polypeptide homologue, used in the scope of the invention.

(dwf?) mutants and encoding polymucleotides that impart at least one dwf? mutant phenotype when expressed in a plant. The polymucleotide sequences encoding the mutant dwf? proteins are useful for producing transgenic plants from transformed plant cells. The polymucleotide sequences are useful for altering the sterol composition of a plant relative to the wild-type plant. The transgenic plant has less cholesterol or increased sterol production relative to the wild-type plant. The mutant sequences are also useful for isolating or creating other mutant cell gene alleles, and for detecting plant regulatory defects which can affect plant growth. The present sequence encodes Arabidopsis thaliana dwf? protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated dwf7 polynucleotide for altering sterol composition of a plant, by introducing polynucleotide into plant cell to produce transformed plant cell and producing transgenic plant from transformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GTTTGGTATTTATTGGATGCACAGAGAGCTTCATGACATTAAGCCTCTCTATAAGTATCT

The invention relates to an isolated dwarf7 (dwf7) polynucleotide that imparts at least one dwf7 mutant phenotype when expressed in a plant. The invention also relates to a recombinant vector comprising the dwf7 polynucleotide and control elements that are operably linked to the polynucleotide and control elements that are operably linked to the polynucleotide and control elements is netrologous to the coding sequence, a nost call transformed with the recombinant vector above, a method of producing a control elements is heterologus to the coding sequence, a host call transformed with the recombinant vector above, a method of producing a control elements is heterologus to the wild-type plant. The dwf7 polynucleotides and polypeptides are useful for producing transgenic plants which display at least one dwf7 phenotype, so that the resulting plants have altered structure or morphology. The transgenic plants are useful in plant breeding, in agricultural production or in industrial applications. The dwf7 polynucleotides are useful for resoluting or solution are mutant alleles and for enhancing certain features such applications. The dwf7 polynucleotides are useful for conferring and increased seed production. They are also useful for conferring desired increased seed production. They are also useful for conferring or reducing cholesterol content and for providing a tool for studying the biosynthesis of brassinosteroids. The dwf7 control element is useful as a plant promoter to express any protein of interest in a transgenic plant, particularly to express a protein involved in the brochmical applications, e.g., regulation of setrol superimental or industrial biochemical applications. This sequence represents thale cress dwarf7 (dwf7) DNA, used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated dwarf 7 (dwf?) polynucleotide, useful for conferring desired traits on essentially any plant and for altering sterol composition of a plant thus increasing or reducing cholesterol content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 CCATGCCACCCATCATATCTACAAGCAGAATACACTCTCTCCATTTGCCGGTAAGTG 120

The invention describes a plant (I) comprising DNA encoding a polypeptide (P1) with 3-hydroxy-3-methylglutaryl-Coenzyme A reductase enzyme activity and a polypeptide (P2) with steroid pathway enzyme activity such as squalene epoxidase, sterol methyl transferase I, sterol C4-demethylase, obtusifoliol C14alpha-demethylase, sterol C5-desaturase or sterol methyl transferase I is terol C4-demethylase, cransferase I is not recombinant vector expressing P1 is useful for increasing the formation of steroid pathway products in a transformed host cell as compared to an otherwise identical nortransformed host cell. (I), a plant containing a cell transformed using a recombinant vector (II) is useful for producing a plant by sexually crossing (I), (II) or (III) with a non-transformed plant. A cholesterol lowering composition (IV) containing at least one sterol pathway product (V), a food product containing (V), and a pharmaceutical composition containing (V) is useful for lowering the plasma
                                                                                       1091

concentration of low density lipoprotein cholesterol or for treating or preventing an elevated plasma concentration of low density lipoprotein cholesterol. (1), or a transgenic plant is useful for making a food additive composition by obtaining oil containing a steroid pathway product from seed of (1), or a transgenic plant and mixing the oil with an edible solublising agent, a dispersant, and optionally an antioxidant. (V) is useful for reducing the concentration of low density lipoprotein cholesterol in plasma. (I) has improved nutritional characteristics. This sequence represents an Arabidopsis thaliana sterol C5-desaturase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    879

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel isolated polynucleotide encoding sterol metabolism enzyme. The nucleotide sequence of the invention is useful for transforming a cell by introducing the sequence into a cell. The sequences may also be useful for producing a transgenic plant, by transgenic plant from the transformed plant cell. The nucleotide sequence is useful for obtaining a nucleic acid fragment encoding all or a substantial portion of the amino acid sequence encoding all or a substantial portion of the amino acid sequence encoding a sterol delta-7 reductase or a sterol-C5 desaurase polypeptide. Probes derived from the nucleotide sequence of the invention may be useful for physical mapping. The present sequence represents a cDNA sequence encoding a sterol metabolism enzyme of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2441
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2501
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2561
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid arrepresentative of expressed polynucleotides in the plant cell with an array or probes repressed polynucleotides in the plant cell with an detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to ablotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATTTGCCGGTATGTCAAAGCTATATGTTCTCAATCTAAATTCAAGAGCTTGTATCAATGG 2381
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              284
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       618
                                                                                                                                                                                                                                                                                                                                                                                       Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              344

                                                                                                           New polynucleotide encoding a transcription factor polypeptide, useful in genetic mapping for plant breeding.
                                                                                                                                                                                          The invention relates to a polynucleotide which encodes a transcription factor. The nucleic acid fragment is useful in genetic mapping for plant breeding. The present sequence is sterol-C5-desaturase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         316 AGATGCTATTCCCTCTCAAAGAGCCATGCTCTTGCAAATATCTGTTGCTATGAAAGCCAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a polymucleotide (or its complement, protein encoding fragment or reverse complement), comprising a nucleotide encoding a polypeptide comprising an amino acid sequence convoluted in or associated with the biosynthesis of isoprenoids in a rice plant. Also included are an isolated polypeptide involved in or associated with the biosynthesis of isoprenoids in a plant, an expression cassette comprising the polymucleotide, a host cell comprising the expression cassette. The polypeptides and polymucleotides include those associated with the biosynthesis of short-chain plastid cassette. The polypeptides and polymucleotides include those associated with the biosynthesis of short-chain plastid alondoil (DMAPP), the biosynthesis of short-chain plastid alondoil (DMAPP), the biosynthesis of short-chain plastid cancercl and polymucleotides include those associated caretorlandor and/or abscisic acids, the biosynthesis of ubiquinone with the biosynthesis of short-chain plastid pathway, placecrol and brassinosteroid metabolism, biosynthesis of ubiquinone, biosynthesis of ubiquinone, biosynthesis of ubiquinone, biosynthesis of conception and sesquiterpenes, protein prenylation, and biosynthesis of chorophyll or haseme. Also disclosed are banana, wheat and corn homologues of some of the rice polymucleotides are useful for producing transgenic plants, where the gene can an alteration in the function of the product encoded by the gene. The plants may also have increased yields and/or produce a better quality product than the corresponding wild-type plant. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotides and polypeptides associated with isoprenoid synthesis in plants, useful for producing transgenic plants, for targeted gene disruption, as well as markers or probes.

The invention relates to a polymucleotide (or its complement, protein encoding fragment or reverse complement), comprising a nucleotide encoding a polymeptide comprising a nucleotide encoding a polymeptide comprising an anino acid sequence involved in or associated with the biosynthesis of isoprenoids in a rice plant. Also included are an isolated polymeptide involved in or expression cassette comprising the polymeptides and isoparthesis of isoprenoids in a plant, an expression cassette comprising the polymucleotide, a host cell comprising the polymptides and blosynthesis of isoparthesis of expression cassette. The polymptides and polymucleotides include those associated with the biosynthesis of isopartenyl diphosphate (IPP) and dimethylallyl alcohol (DMAPP), the biosynthesis of short-chain plastid alcohol (DMAPP), the biosynthesis of short-chain plastid corrected and/or abscisic acids, the biosynthesis of tocopherols, plastoquinone and/or absciste acids, the biosynthesis of tocopherols, phytosterol and brassinosteroid metabolism, biosynthesis of ubiquinone, corrected and brassinosteroid metabolism, biosynthesis of ubiquinone, biosynthesis of chlorophyll or harmen. Also disclosed are banana, wheat and corn homologues of some of the rice polymucleotides. The plants are useful for producing transgenic plants, where the corresponding gene has been disrupted, e.g. to result in a loss, a decrease or an alteration in the function of the product and better quality product than the corresponding wild-type plant. The corresponding are useful for targeted gene disruption, as well as markers and probes. Note: The sequence dence disruption, as well as markers and probes. Note: The sequence date for this patent did not correct or directly from USPTO at a general correction, the product han the corresponding wild-type plant, and a corresponding are useful for targeted gene disruption, as well as markers and probes. Note: The sequence date for this patent did not correct benefit and decreased.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotides and polypeptides associated with isoprenoid synthesis in plants, useful for producing transgenic plants, for targeted gene disruption, as well as markers or probes.
                                                                  ubiquinone; monterpene; sesquiterpene; protein prenylation; chlorophyll;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            segdata uspto gov/sequence.html?DocID=20040010815. The present sequence is a Wheat isoprenoid biosynthesis-associated cDNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a polynucleotide which encodes a transcription factor. The nucleic acid fragment is useful in genetic mapping for plant breeding. The present sequence is sterol-C5-desaturase CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for plant

The nucleotide sequence of the invention is useful for transforming a cell by introducing the sequence into a cell. The sequences may also be useful for producing a transgenic plant, by transforming a plant cell with the CDNA sequence and regenerating a transgenic plant from the transformed plant cell. The nucleotide sequence is useful for obtaining a nucleic acid fragment encoding all or a substantial portion of the amino acid sequence encoding a sterol delta-7 reductase or a sterol-C5 desaturase polypeptide. Probes derived from the nucleotide sequence of the invention may be useful for physical mapping. The present sequence represents a cDNA sequence encoding a sterol metabolism enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             247

The nucleotide sequence of the invention is useful for transforming a cell by introducing the sequence into a cell. The

sequences may also be useful for producing a transgenic plant, by transforming a plant cell with the cDNA sequence and regenerating a transgenic plant from the transformed plant cell. The nucleotide sequence is useful for obtaining a nucleic acid fragment encoding all or a substantial portion of the amino acid sequence encoding a sterol delta-7 reductase or a sterol-c5 desaturase polypeptide. Probes derived from the nucleotide sequence of the invention may be useful for physical mapping. The present sequence represents a cDNA sequence encoding a sterol metabolism enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  373
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  407

                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a polynucleotide which encodes a transcription factor. The nucleic acid fragment is useful in genetic mapping for plant breeding. The present sequence is sterol-C5-desaturase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GATGCCATCCCCACAAATGAAGCTATGAAGAAGCAAATAGCTGTAGCATCCAAGGCTATG
